

## **RJNAMM 2024, Vol. 39 No.5**

A. V. BELYAEV

Towards realistic blood cell biomechanics in microvascular thrombosis simulations 223–242

A. A. DANILOV, A. A. LIOGKY, F. A. SYOMIN

Temporally and spatially segregated discretization for a coupled electromechanical myocardium model 243–258

T. K. DOBROSERDOVA, A. A. ISAEV, A. A. DANILOV, S. S. SIMAKOV

Junction conditions for one-dimensional network hemodynamic model for total cavopulmonary connection using physically informed deep learning technique 259–271

D. S. GREBENNIKOV, B. D. PIVOVAROV, R. S. SAVINKOV, G. I. LOBOV,  
G. A. BOCHAROV

Multi-physics approach to model the lymph transport in the murine immune system 273–287

M. YU. KHRISTICHENKO, I. V. MIRONOV, YU. M. NECHEPURENKO,

D. S. GREBENNIKOV, G. A. BOCHAROV

Computation and analysis of optimal disturbances of periodic solution of the hepatitis B dynamics model 289–300

IU. KUIANOVA, A. BERVITSKIY, A. DUBOVOY, D. PARSHIN

Patient specific numerical hemodynamics for postoperative risk assessment: series case study of EC-IC cerebral bypass 301–310

S. MOROZOV, D. ZHELTKOV, A. OSINSKY

Refining uniform approximation algorithm for low-rank Chebyshev embeddings 311–328
